

Hello!

We hope you and your families are safe and well.

You are required to complete today's work. Please try your very best!

### Independent work

Complete your fluency, reasoning and problem solving questions. Choose the colour questions you are given in class e.g. red, blue or yellow.

$$1 \times 12 = 12$$

$$2 \times 12 = 24$$

$$3 \times 12 = 36$$

## Introduction

Match the questions to the correct answers.

50% is half, so if you want to find 50% of an amount, divide it by 2.

25% is a quarter, so if you want to find 25% of something, divide it by 4.

20% is a fifth, so if you want to find 20% of something, divide it by 5.

10% is a tenth, so if you want to find 10% of something, divide it by 10.

## Percentages of amounts

# Percentages of amounts

**Partitioning** the percentage can sometimes be the most efficient way to find the answer. Then you just add up the separate answers

For example:

**What is 41% of 500?**

**Step 1:** Partition 41% into 40% and 1%.

**Step 2:** Find 40% of 500.

To find 40%, find 10% first by dividing by 10, and then multiply it by 4.

$$500 \div 10 = 50$$

$$50 \times 4 = 200$$

**Step 3:** Find 1% of 500.

To find 1%, you need to divide by 100.

$$500 \div 100 = 5$$

**Step 4:** Add the two answers together.

$$200 + 5 = 205$$

So 41% of 500 = 205

# Percentages of amounts

## 5% of £5

When finding 5%, you would need to **first** find **10%** of £5.

The best way to do this would be to divide 500p by 10, which equals 50p.

Since you are finding **5%** which is **half of 10%**, you would need to **halve** the 50p which would give you **25p**.

## 15% of 8m

You would need to find **10%** of 8m ( $800\text{cm} \div 10 = 80\text{cm}$ ) and **5%** of 8m ( $80\text{cm} \div 2 = 40\text{cm}$ ), then add them together ( $80\text{cm} + 40\text{cm}$ ) to make **120cm**.
